Trade Name: Aluminum Magnet Wire (see insulation glossary and alloy compositions on Page 4)

Chemical Family: Metal

Chemical Formula: N/A

### HAZARDOUS INGREDIENTS

Note: TLV - American Conference of Governmental Industrial Hygienists (ACGIH) Threshold Limit Value (mg/m³)
PEL - OSHA Permissible Exposure Level (mg/m³), 8 Hour Time Weighted Average
STEL - ACGIH Short Term Exposure Limit (mg/m³), 15 minutes maximum exposure
* Ceiling Limit (Do Not Exceed)  D = Dust  F = Fume  NS = Not Specified

Aluminum constitutes 65-97% of total product weight. Organic coatings constitute 3-35% of total product weight.

### PHYSICAL DATA

- **Boiling Point:** 2519° C
- **Vapor Pressure:** N/A
- **Vapor Density:** N/A
- **% Volatile:** N/A
- **Evaporation Rate:** N/A
- **Solubility in H₂O:** Insoluble
- **Specific Gravity:** 2.7
- **Melting Temperature:** 661° C

**Appearance & Odor:** Solid with no odor to very mild cresol odor. Color varies with type of coating. Basic colors are red, green, brown and amber. Special colors are also produced.
FIRE & EXPLOSION DATA

Flash Point: N/A   Fire or Explosion Hazard HMIS Rating:  1

Note:  Aluminum magnet wire presents minimal explosion or fire hazard, however toxic fumes may be evolved when subject to high heat as from a surrounding fire.  Use extinguishing media suitable for the surrounding fire.  Fire fighters should use self-contained breathing apparatus if necessary.

HEALTH HAZARD DATA

Health Hazard HMIS Rating: 3, based on exposure to fumes from combustion products during soldering, hot staking or otherwise burning the insulation. Aluminum magnet wire is not hazardous as shipped.

When burned, soldered or hot staked, magnet wire coatings may release hazardous decomposition products that can cause eye and/or respiratory irritation. Decomposition products may include isocyanates such as toluene diisocyanate (TDI). The National Toxicology Program has listed TDI as reasonably anticipated to be a human carcinogen (9th Report, January 2001). Decomposition of urethanes and coatings rated at 155ºC and lower will begin at 230ºC. Use with adequate exhaust to maintain isocyanate exposure below the OSHA ceiling limit of 20 ppb and below 5 ppb as a ten hour time weighted average.

Health Hazards: Excessive exposure to dust or fumes from soldering, burning or mechanically stripping insulation coatings may cause irritation to the eyes, nose, throat and respiratory system. Acute exposure to aluminum fumes can cause metal fume fever and irritation of the respiratory tract. If ingested, aluminum may be irritating to the stomach and intestinal lining.

Emergency First Aid: If fumes or dust are inhaled, move the individual to fresh air immediately and seek medical attention.

REACTIVITY DATA

HMIS Reactivity Rating: 0, stable material. Hazardous polymerization will not occur.

Incompatibility: Contact with ammonium nitrate may produce violent reaction

Hazardous Decomposition Product: When subjected to temperatures exceeding 200º C, toxic fumes may be evolved from insulation coatings.
**SPILL, LEAK, DISPOSAL PROCEDURES**

Scrap aluminum has reclamation value. If this is not practical, it must be disposed of in accordance with local, state and federal regulations, which may require specific labeling, packaging, transportation and disposal procedures.

In solid form magnet wire poses no special clean up problems. If material is in powder or dust form clean up should be conducted to minimize airborne powder and dust and to avoid contamination of air and water.

RCRA Hazardous Waste Number: Not regulated.

---

**EPCRA TITLE III  SECTION 313**

Aluminum (fume or dust) is subject to the reporting requirements of Section 313 of Title III of the Emergency Planning and Community Right-To-Know Act and 40 CFR Part 372 of the Federal Register. Additional information can be obtained from the Emergency Planning and Community Right-To-Know Information Hot Line, US EPA, (800) 535-0202.

---

**EC RoHS DIRECTIVE COMPLIANCE**

---

**SPECIAL PROTECTION**

Use adequate ventilation to meet exposure limits, prevent irritation and maintain exposure limits to by-products from soldering or burning insulation below OSHA permissible exposure levels. If these levels are exceeded use NIOSH approved respiratory protection. Wear safety glasses with side shields when soldering or mechanically stripping insulation.
SPECIAL PRECAUTIONS

No special precautions are required for normal handling of magnet wire. Avoid storing magnet wire near materials that are reactive with aluminum.

PACKAGING AND LABELING REQUIREMENTS

D.O.T. Shipping Name: Not Regulated  
Hazard Class: NA
